# 4-Iron & Hybrid Ball Position Drill

### Setup

Start the ball about two balls forward of center—just inside your lead armpit. This position allows for a level or slightly descending strike ideal for both clubs.

### Swing Cue

Lay down two alignment sticks—one for your feet, one toward the target. Use this to check setup consistency and hit balls with the sticks in place.

### What to Notice

Each time you practice, this ball position and alignment check helps groove a reliable launch pattern—especially for long approach shots with hybrids and long irons.
