Driver Ball Position Drill

Setup

Position the ball just off the inside of your lead heel. This forward setup allows your driver to catch the ball on the upswing—ideal for launch and carry.

Swing Cue

You’re not trying to hit down—let the driver sweep through impact. Feel your chest behind the ball and let the club bottom out slightly behind the ball, then rise up at contact.

What to Notice

When done right, your launch angle will improve, spin will reduce, and you’ll carry the ball farther. Make small adjustments based on your flight and trajectory needs.
