Driver Headcover Path Drill

Setup

Place a soft headcover just outside the ball on your target side. Take your normal driver setup and get ready to swing without touching the headcover.

Swing Cue

Swing from the inside. If your path comes over the top, you'll clip the headcover. The goal is to avoid it and swing down your intended target line.

What to Notice

This drill gives instant feedback. If you slice your driver or swing across the ball, you'll see it immediately—and start training a more efficient, powerful inside path.
