Fix Your Slice Drill

Setup

Set up like normal with your driver. Then drop your back foot slightly behind your front foot. This closed stance promotes an inside-out swing path.

Swing Cue

Focus on squaring or slightly closing the club face through impact. Make smooth, slow swings and feel the club working from the inside as you deliver a low draw shape.

What to Notice

If done right, your ball should start more right and curve left or fly straight. You're fixing the slice at its root. Once the motion feels natural, return to your normal stance while keeping the path and face control.
